Market Street Roadway Improvements

West Peoria, Illinois

Project Scope:

Market Street is approximately 1100' in length and lies in close proximity to Bradley Park in West Peoria. The roadway has a two lane bituminous surface and lacks storm sewer. Market Street acts as the natural drainage path for approximately 55 acres that experiences a vertical elevation difference of 120' across the watershed. The lack of storm sewer and excessive slope of the watershed has led to severe erosion and pavement deterioration on Market Street and adjacent properties. The Market Street Roadway Improvements were initiated to create a solution to the drainage & erosion issues, as well as providing an improved roadway surface. This project is currently under construction and scheduled for a November, 2008 completion. The project is being processed through IDOT District 4 Bureau of Local Roads. Hermann & Associates is providing construction inspection and documentation services on this project.

Project Elements:

- Topographic Surveys
- Boundary Surveys
- Temporary Easements
- Storm Sewer System
- Utility Coordination
- Curb & Gutter
- Sidewalk & Driveways
- Pavement Replacement
- Erosion Control Measures & Best Management Practices (BMP's)
- Construction Inspection & Documentation

Project Financials:

Funding Source: Motor Fuel Tax
Construction Cost (Low Bid): 520,000

Client:

City of West Peoria, Illinois
Mayor Jim Dillon
2506 West Rohmann Avenue
West Peoria, IL 61604
